5. Safety Inspection:

Frequency: Following any repair work or extreme weather event, such as a hurricane.

Inspect the installation for potential sharp edges, especially after repair or polishing work.

Ensure that mirror steles are securely anchored to prevent accidental dislodgement. Gently trying to shake the column can help detect any looseness in the fixings. Ensure that column connections to the base are secure and that no structural deformation has occurred.

Spot-check randomly selected column bases for signs of corrosion, loose fastenings, or misalignment every two years.

Note:

Jeppe Hein gmbH will provide a cleaning device with the sculpture and instruct the maintenance personal either in person or via video.
