**18. Provide information regarding any favorable cost containment approaches or ideas that have been successful for you.**

1. Through the Core & Main "Online Advantage" web based Customer portal, the City can enter your orders, view orders and invoices, review vendor inventory levels, and run usage reports. In addition, once properly set up, the City can review their own inventory levels of products managed by Core & Main, in the City's warehouse and yard, as well as managing the minimum and maximum on hand quantities of each item, based on your actual usage, which can reduce the investment cost to the City.
2. The safety stock levels will be managed through the Core & Main Management System, by identifying the safety stock quantity required or desired by the City, and entering them into the IMS for each inventory item. Once these safety stock quantities are in the IMS, in the event that the specified inventory level for safety stock is reached, a report is automatically generated to inform the Core & Main designated "contact" of reaching the safety stock level for an individual item, so they can be replenished immediately back to the desired inventory level, preventing most inventory "outages".
3. Core & Main will provide all necessary one on one training for the use of the "Online Advantage" web based Customer portal, through which the City can input orders, as well as manage their own ordering parameters, such as stock level minimums and maximums. These order parameters can be adjusted by the City, based on usage and demand, and will also provide usage reports for forecasting, identifying high demand items and aiding in the prevention of "out of stock" instances.
