PARTNER
FOR MANY
YEARS TO
COME**

Plexipave[®]

A STRONGER BUSINESS PARTNER

In recent years, we launched an initiative to reinvest and reestablish the California Sports Surfaces brand as the clear industry leader in the sports coatings and flooring industry.

Part of this effort included hiring some of the industry's top talents, bringing new focus and new ideas to the company.

We also brought new emphasis to quality control, with the addition of a brand-new lab testing stations to ensure that testing and quality control are the most important part of our mission.

Our latest major development comes in the form of a new product line, California Sports Surfaces Ultra Performance, as well as a streamlined color offering.

This is an exciting time at California Sports Surfaces and our extensive investment in the brand will make us a stronger business partner for many years to come.

ULTRA PERFORMANCE

After months of extensive testing and product development, we have reformulated our products for optimum performance. The new California Sports Surfaces Ultra Performance line offers:

Better Coverage

Exceptional Abrasion Resistance

Better Flexibility

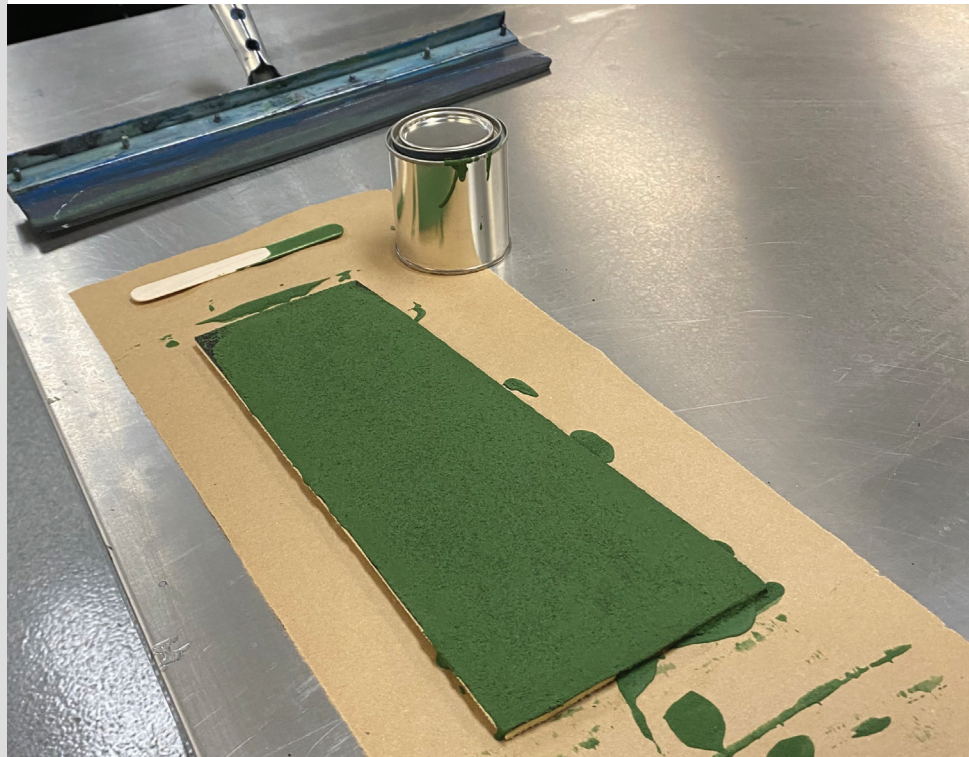

Improved Permeability

Better UV Resistance & Color Retention

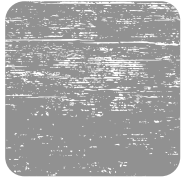

Better Appearance

PERFORMANCE TESTS

Our newly reformulated Ultra Performance line has gone through extensive testing by a third-party lab. The results reflect a coating that offers exceptional UV protection, improved coverage, optimum abrasion resistance, and more.

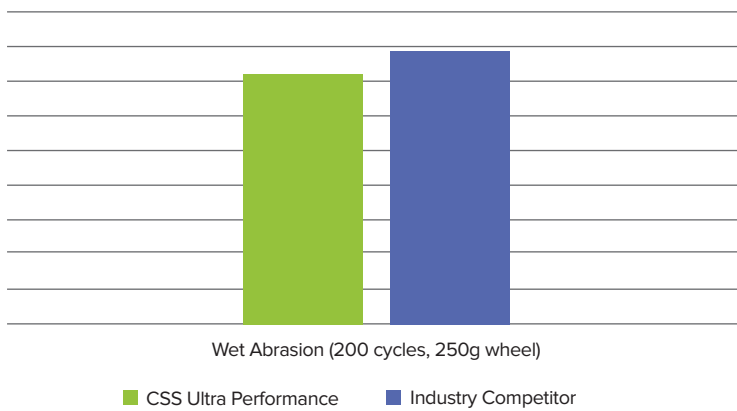

Exceptional Abrasion Resistance

Taber Abrasion

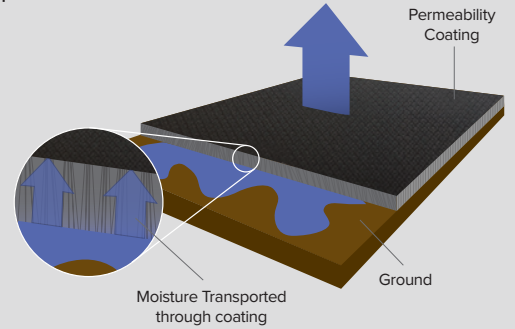

Ultra Performance was formulated for exceptional abrasion resistance and durability to minimize surface wear.

Taber Abrasion (mass lost after abrasion cycles)

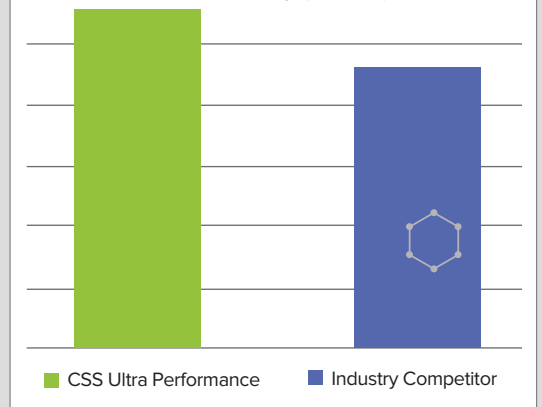

Permeability

Improved permeability allows the coating to breathe from the ground up and avoids moisture trapping, a common cause of a number of surface problems.

Permeability (Perms)

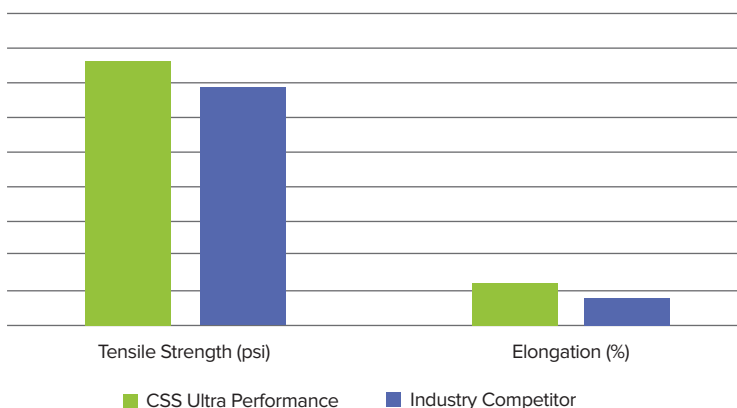

Better Flexibility

Tensile Strength and % elongation

This test demonstrates the flexibility and strength of a coating. Tensile strength provides more pliability when applying a coating over rubber mat systems or imperfect asphalt.

Tensile Strength and % Elongation

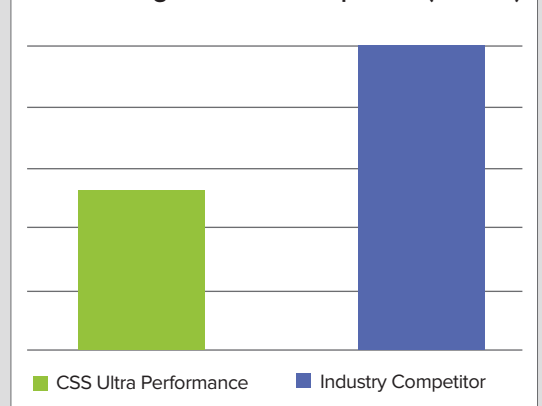

Better UV Resistance & Color Retention

QUV

Color change after UV exposure. For this test, we focused on the colors that were most susceptible to UV degradation, with a great improvement over previous formulations and current industry offering.
